TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, HTML/CSS
- **Frameworks:** Next.js, React, FastAPI, Django, Tailwind CSS
- **Databases:** PostgreSQL, MySQL, MongoDB, Firebase, Supabase
- **AI & Architecture:** LLMs (OpenAI, Claude, Gemini), Computer Vision, Prompt Engineering, System Design
- **Cloud & Tool:** Vercel, Git, RESTful APIs, Serverless Functions, WebSockets

Work Experience

AI Systems Engineer Intern — Zummit Africa

Sep 2025 - Jun 2026

- Developed and deployed backend systems automating classification and prioritization of legal documents
- Built ML pipelines and REST APIs processing data in real time, reducing manual workload for the team
- Integrated AI models into production services, maintaining secure and stable inference under real usage
- Collaborated with product and engineering teams to align technical work with user needs
- Debugged and iterated on model accuracy and backend stability through continuous testing

Backend Engineering Lead Intern — CuratED

Apr 2025 – Aug 2025

- Designed and implemented scalable Django REST APIs for content aggregation and progress tracking
- Participated in sprint planning, pull request review, and architectural decisions with the team
- Improved test coverage and developer workflows, reducing bugs before deployment
- Partnered with frontend engineers to define clear API contracts and maintain alignment on priorities

Frontend Developer — TLCC.ng

Oct 2025 – Jan 2026

- Built and maintained the full frontend experience for a production platform using HTML, CSS, and JavaScript
- Integrated dynamic content and interactive features with backend APIs
- Managed application state and user workflows, balancing performance with maintainability

Backend Developer — HealthTech for Africans × Alabama A&M University

Sep 2024 – July 2025

- Extended backend features for health reporting and resource coordination tools
- Designed RESTful APIs supporting data collection and cross-system integration
- Worked in agile cycles with an international, cross-functional team

PROJECTS

Tradeoff — AI-Powered Engineering Reasoning Engine

tradeoff.pxxl.run

- Engineered a multi-LLM (OpenAI, Claude, Gemini) reasoning pipeline to analyze and pressure-test system architectures
- Developed a structured data extraction engine to capture edge cases and dynamically render interactive Mermaid.js diagrams
- Built a full-stack Next.js and React application featuring a dual-rendering system for web interactivity and PDF report generation

ClosetAI — AI-Powered Outfit Recommendation Platform

closetai-three.vercel.app

- Developed a production computer vision pipeline utilizing multimodal AI to extract structured JSON data from user images
- Architected a three-tier fallback system (LLMs, ML, and rule-based heuristics) to ensure 100% recommendation uptime
- Built scalable REST APIs using Python, FastAPI, and PostgreSQL with a robust middleware data validation layer

PinPoint — Real-Time Delivery Tracking System

pinpnt.vercel.app

- Built a real-time geospatial tracking application utilizing JavaScript, Firebase Realtime Database, and OSRM routing
- Resolved geolocation ambiguity by implementing live GPS coordinate synchronization over manual address parsing
- Engineered automated route optimization and real-time data sync, achieving sub-2-second latency between client views

FormHook — Form Automation and Webhook Delivery Platform

formhookapp.vercel.app

- Developed a high-throughput Python and FastAPI backend for webhook ingestion with automated retry and validation logic
- Designed secure RESTful API endpoints implementing strict rate limiting and structured error handling
- Built a responsive Next.js frontend for users to dynamically create, monitor, and manage webhook integrations

EDUCATION

- Software Engineering, MIVA Open University, 2026
